

The Siberian tiger

The Siberian tiger lives in the forest. It is cold and snowy in winter, and hot in summer. The temperature is between -45° in winter and 30° in summer. It can swim for 5 km.

The Siberian tiger is the third largest predator on Earth.

Females are 2.3 meters long and males are 3.3 meters long. It weighs 760 pounds. Its claws are 10 cm long.

Its fur isn't the same in winter and in summer:

- in winter the fur is thick and protects the tiger from very low temperature (-45°).
- in summer the fur is thinner
